

## Decodable Book Selector – Get Reading Right Scope and Sequence – Basic Code

Different series of decodable books have different scope and sequences, as a result they do not introduce GPCs (Grapheme Phoneme Correspondence – or the relationships between sounds and spellings) in the same order. When using decodable texts as part of literacy instruction, it is important that beginner readers are only given texts to read that contain GPCs that they have been taught.

To assist teachers and other educators, SPELD NSW has prepared a collection of these “Decodable Book Selectors”. **The organisation of decodable readers in these resources provides a suggested guide to the selection and organisation of readers from a range of different series in accordance with the focus scope and sequence.** We do hope that these Decodable Book Selectors assist you in effectively selecting and organising your decodable books!

**The focus scope and sequence for this particular Decodable Book Selector is the basic code of the Get Reading Right scope and sequence.** To see a full range of the decodable readers sold by SPELD NSW please go to the SPELD NSW bookstore. For other Decodable Book Selectors following different scopes and sequences please see the SPELD NSW website.

In collating this Decodable Book Selector, we have done our best to ensure that each book is placed in the best place in relation to the focus scope and sequence. We note:

- The Information contained about each book is the set/level within the decodable book series that each book belongs and the name of the book, along with the GPCs covered in that book in the column to the left of the title.
- Where there is a "revision book" in a set/level that book has been included after the last book.
- Sometimes the order of introduction of GPCs in the target scope and sequence means that certain sets/levels within a particular decodable book series cannot be introduced for some time, until all the GPCs in that set/level have been taught to students. To reduce the impact of the disparity between the target scope and sequence and the decodable book series, you can introduce a small number of additional graphemes earlier into your scope and sequence (eg, r, qu, ck or v) to allow for a better distribution of decodable readers across the target scope and sequence. Please also refer to the SPELD NSW Scope and Sequence which has been developed to integrate the different scope and sequence from high quality decodable book resources to allow for the easy selection and organisation of decodable books. This Scope and Sequence is available from the SPELD NSW website.
- If you have any feedback about these Decodable Book Selectors we would love it if you would let us know ([enquiries@speldnsw.org.au](mailto:enquiries@speldnsw.org.au))
